GRANDHI SAI SATHVIK

ASPIRING FULL STACK DEVELOPER

Phone: +91 9032023112

Email:

SaiSathvik.Grandhi_2026@woxsen.edu.in

Github: github.com/gsaisathvik

LinkedIn:www.linkedin.com/in/g-sai-sathvik-670a462a9/7

SKILLS

- **Languages**: Python, JavaScript(Basics), Java(Basics)
- **Web Technologies**: HTML5, CSS3, Node.js, Express.js, React.js , Angular(Basics)
- **Machine Learning libraries** : Scikitlearn,numpy, Pandas, Matplotlib
- **Tools**: Git, Docker, AWS, Jupyter
- **Databases**: MySQL, MongoDB

EDUCATION

B.Tech, Computer Science, 2022- 2026
Specialization : CSE CORE Woxsen University, India

CGPA:8.0/10

CERTIFICATIONS

- 2024-05 | Data Analysis with
- Python - Coursera
  2024-06 | Data Structures -
- NPTEL Certification for Computer Vision

PROFESSIONAL SUMMARY

Highly drivenand adaptable third-yearB.Tech student in Computer Science and Engineering, specializing in core concepts. Passionate about solving realworld challenges through logical thinking and innovative solutions. Thrives in dynamic environments, efficiently managing multiple tasks while fostering teamwork and collaboration. Committed to continuous learning and leveraging technical expertise to achieve impactful results.

EXPERIENCE

FullStack Developer Intern | BLUESTACK.IN *June2025 – July 2025*

Tech Stack : React JS, Restfull API, PostgreSQL

- I**ntegrated IPO** web application and REST API into Bluestock's platform, reducing manual data entry efforts by **60%.**
- Deployed a scalable backend using Django and PostgreSQL, **managing 100+ IPO records** with real-time search, filter, and PDF download features.
- Collaborated with a 3-member team to design UI, implement secure admin dashboard, and optimize database models, boosting system efficiency and reliability by **20%.**

KEY PROJECTS

AI-PoweredResume&Job Matcher for Freshers and Students, *Tech Stack: React.js, Node.js, Express.js, MongoDB, Razorpay API, AWS S3, NLP, LLMs*

July2025 - SEP2025

- Situation: Many freshers struggle to match resumes with suitable jobs and prepare for interviews.
- Task: Build an AI-powered web app to bridge this gap.
- Action: Developed a MERN-stack platform integrating NLP and LLMs for resume analysis, mock interview generation, and improvement tips.
- Result: Delivered an intelligent system recommending best-fit jobs and personalized interview guidance, enhancing placement readiness.

Human Activity Recognition using Sensor Data (Time Series ML)

Tech Stack: Python, TensorFlow/Keras, Scikit-learn, Pandas, NumPy, Matplotlib

aug 2023 – Nov 2023

- Situation: Recognizing human activities from wearable sensors is vital for fitness tracking and healthcare monitoring. Task: Build a
- machine learning model to classify human actions from smartphone accelerometer and gyroscope data. Action:
- Preprocessed time-series sensor data and trained models including Random Forest, SVM, and LSTM/GRU/1D-CNN networks for temporal pattern learning. Result: Achieved 94% accuracy in
- predicting activities such as walking, sitting, and climbing stairs, enabling real-time activity recognition for smart devices.

INTERESTS

- Problem solving
- Reading
- Team Sports

LANGUAGES

- English
- Telugu
- Hindi

Medi Guide - Smart Healthcare Assistance Platform *Nov 2022 - Dec2022*
Tech Stack: React.js, Node.js, Express.js, MongoDB

- Situation: Access to timely and personalized healthcare remains a challenge in many communities.
- Task: Develop a web-based platform to simplify access to medical services and personalized healthcare support.
- Action: Designed and built a MERN stack application enabling users to connect with healthcare providers, access medical resources, and manage health needs efficiently.
- Result: Delivered an accessible, tech-driven solution that improved healthcare reach, speed, and convenience—empowering individuals with 24/7 personalized medical assistance.

WanderList - Smart Travel Planning Platform *Jun2024-Nov2024*
Tech Stack: React.js, Node.js, Express.js, MongoDB, Google Maps API, Python

- Situation: Travelers often struggle to find, verify, and plan trips to new locations efficiently.
- Task: Build a full-stack platform to help users explore destinations, plan trips, and ensure uploaded photos match real-world locations.
- Action: Developed a MERN-stack web app with interactive maps, search tools for restaurants/hotels, and image verification for trip photos.
- Result: Delivered an intelligent travel app that enhances trip planning, providing verified travel content and interactive discovery for users.

Multi-Modal Skin Cancer Detection Using Dermoscopic Images & Clinical Metadata
Tech Stack: Python, PyTorch, OpenCV, CNN, ANN, Scikit-learn, Pandas

- Situation: Early skin cancer detection is difficult due to complex dermoscopic image analysis and reliance on visual inspection.
- Task: Develop an AI system to classify multiple skin cancer types using dermoscopic images and clinical metadata.
- Action: Trained CNN and ANN models on the HAM10000 dataset using PyTorch, with strong preprocessing and validation pipelines.
- Result: Achieved accurate multi-class classification, with CNN significantly outperforming ANN, proving an effective and scalable diagnostic solution.

ACHIEVEMENTS

- *Achieved Top 10 position among 150+ teams in Udhgam Hackathon, demonstrating strong problem-solving and innovation skills.*
- Earned certification in NPTEL – Deep Learning for Computer Vision, gaining hands-on expertise in CNNs, image classification, object detection, and transfer learning.
