Kolla Leela Venkata Niteesh

+91 7981813820 | klvniteesh05@gmail.com

Niteesh Kolla | klvniteesh

Hyderabad, Telangana, India

OBJECTIVE

A hardworking and punctual individual with a quick grasping ability, eager to learn newthings and adapt tochallenges. Possesses strong interpersonal skills, enjoys interactingwith friends and people, and values teamwork and collaboration to achieve common goals.

EDUCATION & ADDITIONAL INFORMATION

Education : Woxsen University – 3/4 (CGPA) **Hyderabad,Telangana(2022- 26)**

Languages: English (Professional), Telugu (Native)

Interests: Sports(cricket,batminton),Music

INTERNSHIP

Software Development Intern | Datenwork Solutions (Dec 2025 – Present)

• Developed a serverless Album Selection & Client Review Platform using React and Firebase, enabling structured project–event workflows for studio-managed photo review and delivery.

• Implemented role-based access control and PIN-based authentication using Firebase Authentication & Firestore security rules, ensuring restricted client actions (view/select/flag only).

• Integrated Cloudflare R2 object storage for scalable and cost-efficient photo storage, implementing secure upload pipelines and controlled access for final album delivery.

• Designed lifecycle management logic for project retention, signature album generation, and controlled content access, ensuring studio-level ownership and data security.

PROJECTS

Project 1 – Signature Detection (Jan – Apr 2024):

- AI-Powered Signature Verification – Developed a system that accurately detects and verifies signatures using advanced machine learning techniques.
- Real-Time Matching – Trained on a dataset of sample signatures, enabling instant comparison and authentication of user-provided inputs.
- High-Precision Detection – Utilized OpenCV for image processing and CNNs for pattern recognition, ensuring reliable and secure signature verification.

Project 2 – AI-Powered Predictive Analytics for Waste Valorization (Capstone Project):

- Smart Waste Composition Prediction – Developed ML models to predict key waste characteristics such as moisture content, calorific value, and biodegradability to improve processing accuracy.
- Optimal Treatment Recommendation System – Implemented Random Forest and Gradient Boosting models to recommend the most efficient valorization pathway (Anaerobic Digestion, Composting, Recycling, Pyrolysis).
- Explainable & Scalable AI Architecture – Designed an end-to-end system with SHAP/LIME-based explainability and dashboard integration, enabling transparent, data-driven decision-making for sustainable waste management.

SKILLS

- **Programing Languages:** C ,Python ,JAVA,
- **Web Technologies:** HTML, CSS, Java Script,React
- **Skills:** Machine Learning, Cloud Computing and NoSQL

CERTIFICATIONS

- Introduction to NoSQL Databases – Coursera | Oct 2023
- Introduction to Web Development – Coursera | May 2023
