AKASH SHETTY

ASPIRING ARTIFICIAL INTELLIGENCE DEVELOPER

Phone: +91 6301775383

Email: akash.shetty_2026@woxsen.edu.in

Github: github.com/akashshetty17

LinkedIn: www.linkedin.com/in/akash-shetty-b244752b7

-

SKILLS

- **Languages**: Python, JavaScript, Java, SQL
- **Web Technologies**: HTML5, CSS3, Node.js, Express.js, React.js
- **Machine Learning**: Scikit-learn, TensorFlow, Keras
- **Tools**: Git, Docker, AWS, Jupyter
- **Databases**: MySQL, MongoDB
- **Other** : Problem Solving, Collaboration

EDUCATION

B.Tech, Computer Science, 2022- 2026
Specialization : AI & ML
Woxsen University, India

CGPA: 8.5/10

CERTIFICATIONS

- Data Structures- Coursera
- Object Oriented Programming in Java- Coursera
- Databases and SQL for Data Science and Python
- Introduction to Deep Learning and Neural Networks with Keras

PROFESSIONAL SUMMARY

Artificial Intelligence & Machine Learning Enthusiast with hands-on experience in full stack development, cloud-based deployments, and machine learning applications. Skilled in building scalable web solutions and implementing AI-driven models to solve real-world problems with efficiency and innovation.

KEY PROJECTS

Any Time Fuel (ATF) - (July 2024 – Oct 2024)
Technologies: Java, Android Studio, Firebase, Razorpay API

- Designed an Android application to streamline the fuel purchasing process by enabling pre-booking and digital payments.
- Developed the user interface and integrated Razorpay API for secure and seamless payment processing.
- Connected the app with Firebase for authentication and transaction management.
- Implemented a tag-based system to automatically unlock fuel pumps, reducing wait time at stations.
- Currently enhancing the app with a predictive feature to estimate fuel needs based on previous transactions and user behavior.

Cricket Player Recognition System - (Nov 2024-Jan 2025)

Tech Stack: Python, OpenCV, TensorFlow, Dlib

- Built a real-time facial recognition system using OpenCV and deep learning to identify cricket players from videos and images.
- Trained and fine-tuned a facial recognition model on a curated player dataset, achieving 94.5% accuracy.
- Optimized the model for high-speed inference, ensuring smooth and reliable identification through webcam input.
- Enhanced recognition efficiency by tuning TensorFlow pipelines for real-time processing and minimal latency.

Hate Speech Detection on Social Media - (Jan 2025 – March 2025)
Tech Stack: Python, NLP, Sentiment Analysis, Pre-trained Classifiers

- Developed an NLP-based system to detect and classify hate speech related to religion, gender, caste, and poverty.
- Implemented aspect-based sentiment tagging using pre-trained language models for contextual accuracy.
- Processed and analyzed large volumes of social media text data for training and evaluation.
- Achieved improved detection precision by integrating semantic and sentiment features into the classifier pipeline.

Python Mini Projects
Tech Stack:Python
• Developed mini apps like a Quiz Game and Number Guessing Game to demonstrate programming logic and user interaction.

INTERESTS

- Data driven Problem Solving
- Strength Training & Discipline Building
- Creative Thinking through Visual Media

LANGUAGES

- English
- Hindi
- Telugu

ACHIEVEMENTS

- Participated in 24-Hour National Hackathon - MGIT, Hyderabad
- Machine Learning Workshop - IIT Hyderabad
