Academics

WoxsenUniversity| *2022 - 2026*
Bachelor of Technology **- 2.76/4.0**

Narayana Junior College | *2020 - 2022*
Intermediate **- 84.8%**

Dr.K.K.R'S Gowtham School | 2020
Schooling **- 10GPA**

Skills

- SQL
- ML
- Java
- Python
- C
- C++
- HTML
- CSS

Tools

- Programming platforms(eg. GoogleColab, Visual Studio)
- Pycharm(Python)
- Machine Learning
- Anaconda(Python)

Professional Skills

- Good Logical Thinking
- Planning and Coordination
- Teamwork and Collaboration
- Risk Management
- Decision Making

Languages

- English
- Telugu
- Hindi

Objective

Proactive, resourceful professional, and talented for finding creative solutions to problems and simplifying work. thrives in hectic settings, accurately juggling several priorities while maintaining a cooperative attitude. devoted to maintaining growth and surpassing group goals by using innovative and strategic problem-solving techniques

Internship

Organization: LAUNCHED Global
Duration: May 2025 – June 2025
Internship Code: LED05-INT020

- Completed a structured certification internship focused on core concepts of Artificial Intelligence, including supervised and unsupervised learning techniques.
- Gained hands-on experience with Python-based AI tools and libraries such as NumPy, Pandas, Scikit-learn, and TensorFlow.
- Applied algorithms in real-world use cases, exploring classification, regression, and clustering tasks.
- Developed problem-solving and critical thinking skills through assignments and guided projects. Improvedunderstanding of ethical considerations, AI workflows, and deployment practices.

Projects

Project - 1 - Autism spectrum disorder (ASD) 2024

- Developed a machine learning-based system to detect Autism Spectrum Disorder (ASD) based on user-inputted symptoms.
- Built a user-friendly interface (web, application) to input symptom data and display results.
- Applied supervised machine learning algorithms to classify individuals as ASD- positive or negative based on input features.

Project - 2 - Intelligence Excuse Generator- AI 2025

- Designed and developed an AI-based application that generates customized, context- aware excuses using NLP techniques and prompt engineering with OpenAI's GPT models.
- Built the front-end using Streamlit, enabling a responsive, user-friendly interface for seamless input, output, and customization.
- Tech Stack: Python, Streamlit, OpenAI GPT API, gTTS, SpeechRecognition, PIL, FPDF, NumPy, Pandas.

Project - 3 - Movie Recommendation System ,Tech Stack Used-Python & Streamlit as Frame work. 2023

- Movie Recommendation System – Built a recommendation engine using machine learning algorithms like collaborative filtering and content-based filtering.
- Integrated TMDB API for movie data and deployed a web-based interface using Flask and React.
- Optimized for personalized user experience and efficient data processing.

Certifications

- Introduction to Generative AI- by Coursera
- Core Java Specialization Introduction to Deep Learning & Neural Networks with Keras
- Object-Oriented Hierarchies in Java - by Coursera
- Introduction to Object-oriented Programming with Java - by Coursera
- Operating System Fundamentals - by Coursera
- Introduction to Web Development - by Coursera
