No. 9663003518

Career Overview

An aspiring Artificial Intelligence and Machine Learning professional, passionate about developing innovative solutions in machine learning, and artificial intelligence. With hands-on experience in building AIML models, and collaborative projects, I strive to combine creativity with technical expertise to solve real-world problems

---

Skills

1. **Machine Learning & Reinforcement Learning** – Applied ML/RL techniques to build intelligent models.
2. **Deep Learning (Neural Networks)** – Training and deploying deep neural networks.
3. **Generative AI** – Trained to develop intelligent, content-generating applications.
4. **Python, Java** – Proficient in software development and automation using object-oriented and scripting languages.
5. **HTML, CSS, PHP, XML** – Skilled in creating responsive and dynamic web applications.
6. **Web Scraping** – Beautifulsoup and Selenium.
7. **Natural Language Processing (NLP)** – Text analysis and language modelling.

Experience

AIML Intern — *Ediglobe*
June 2024 – August 2024

- Assisted in building machine learning models for predictive analytics and recommendation systems.
- Conducted data cleaning, feature extraction, and hyperparameter tuning to optimize model performance.
- Supported deployment and documentation of model pipelines for internal testing and client presentations.

Projects

Swarm Drones for Disaster Management *(Mar – July 2023)*
Built prototype to assist in rescue operations during natural disasters

- Developed a swarm drone system capable of detecting human presence in disaster-struck areas using **onboard sensors.**
- Programmed drones to coordinate and guide survivors to safe zones using **path optimization algorithms.**
- Focused on real-time communication and decision-making among drones to enhance rescue efficiency.
- Aimed at improving disaster response time and reducing reliance on manual search efforts**.**

Deepfake Detection *(Sept – Dec 2023)*
Machine learning solution for identifying manipulated visual media

- Designed and trained a **Convolutional Neural Network to detect inconsistencies in deepfake videos** and images.
- Focused on **facial feature distortions, unnatural blinking, and artifact detection** as key indicators.
- Achieved reliable accuracy through dataset augmentation and fine-tuning of the CNN model.
- Developed a user interface to flag suspected deepfakes for forensic analysis or moderation.

AI-Powered Personal Tutor *(Sept – Dec 2024)*
*A Real-time personalized tutor for ease and interactive learning using **generative AI***

- Built an **AI tutoring system using GPT-4** for real-time, personalized explanations and quizzes.
- Added voice input via Whisper, flashcard generation, and progress tracking features.
- Designed to boost **student engagement and retention through interactive learning**

Education

B.Tech in Artificial Intelligence and Machine Learning
Woxsen University, Hyderabad | *August 2022 – Expected August 2026*

- Current CGPA: 3.2/4

Certificates

1. **Google Cloud:** Generative AI
2. **IBM:** Deep Learning with Keras
3. **DeepLearning.AI:** Tensorflow for AIML
